

What I Need?

1. Windows 10 Style preloaded:

-> Windows-10 e profile pic & name thake, tar niche loading Circle thake. I just need it.

❖ Amr ai application ao ekta BMW care + name thakbe then loading thakbe dada. After execution the loading time, then animate fadeout hoye amr home page ta asbe.

2. Pure OOP backend using php/mysql with MVC pattern.

3. When I clicked “modal button”, then registration form coming, that’s good. But In this form, I don’t need to “SAVE CHANGES” button.

Car Registration

Car Reg. No
Type car reg. no here...

Engine No
Type engine no here...

Model
Choose Car Model

+ SAVE ~~SAVE CHANGES~~ X CLOSE

click

NB: “SAVE CHANGES” button ta asbe jokhon ami “EDIT” button e click korbo.

List of Registered Car

Search registered car...

#	Reg. No	Engine No	Model	Action
1	BMW-01	BMW-67834	BMW X.1	 EDIT  DELETE

click

4. “SAVE” or other buttons proper data or execution successfully hole ami “toast” e successfully message disse ekhon static vabe. Amr Form Jodi blink thake then Jodi kew “SAVE” button e click dhai tahole dynamically “toast” e Wrong / or user er bujte sobidha hoy emon message dibo.

The screenshot shows a 'Car Registration' form with fields for 'Car Reg. No', 'Engine No', and 'Model'. A red handwritten note 'Toast SMS →' points to a dark toast message at the top right that says 'Car Registration has been successfully Done!'. Below the form are three buttons: '+ SAVE', '✎ SAVE CHANGES', and '✕ CLOSE'. A 'DELETE' button is visible on the right. A red '+' icon is in the bottom right corner.

5. Tumr project requirement onojai-e “Choose Car Model” option e dadabase “car_model” table thake age thaka-e care models gula ana thakbe. Then ami baki input field puron korle data save hobe sathe sathe oi page ai dekhabe. And ekta Search option rakes oi kahne reg. no engine no or care modle or ek-2ta character milla-e sathe sathe only oi care tai dekhabe.

List of Registered Car

Search registered car... → SEARCH

#	Reg. No	Engine No	Model	Action
1	BMW-01	BMW-67834	BMW X.1	<button>✎ EDIT</button> <button>🗑 DELETE</button>

→ Data

N.B:

→ Dada Normal / Procedural PHP programming diye ami ai application ta korte parbo ai tukon confident ase. But emon user friendly kaj and “JSON” data niye nijer issa moton play korte pari na. ai ta parla-e amr present sokol kaj-e valovabe complete korte parbo.

→ R ekta kotha dada, jQuery only user interface er jonno use korla-e better, jQuery te ekto beshi code likhte hoy (And je koykta job apply korsi, tara mximum-e **Angularjs / reactJS chai**) r AngularJS ta ekto ekto pari, ai angulajs diye Jodi “JSON” dada paly ta sikiye dita taile amr jonno valo hoto.

→ Dada ai koykta kjaer jonno-e amr Development hose na. **Udemy** complete kono e-o passi na. nk ghata ghati kori, even ami sara rat-e jagi google kori, ager moton only **facebooking** kori na, ai jonna-e amr diner belai ghum beshi trust me dada. Jani tum nk busi thako, tao Jodi time pao make ai koyk ta jinis dekhiye dila-e hobe / bujiye dila-e ami confident nijeke “WEB APPLICATION DEVELOPER” hisebe dar korte parbo.
